

Change of Land Use in Haryana: approval and preparation guide

DRAFT FOR REVIEW | GUIDE | B035

Designated reviewer: Atul Goyal. Review pending. PDF prepared 18 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

Change of Land Use, commonly called CLU, concerns permission to use land for a proposed purpose under the applicable planning framework. For a factory, warehouse or commercial project in Haryana, begin by checking the site's location, planning status and intended use. Ownership of land does not by itself establish that the proposed development is permitted.

A useful CLU enquiry begins with the exact parcel and a clear project description. The authority and application route depend on jurisdiction. Haryana's Urban Local Bodies department publishes a CLU procedure for specified controlled-area sites within municipal limits; that procedure should not be applied automatically to every parcel in the state. [Official ULB CLU procedure](#).

Need help taking a specific site forward? Rapid's [CLU approval service](#) explains the documentation, coordination and follow-up we can handle. The guide below helps you prepare for that discussion.

What should you check before buying or committing to a site?

Bring together the revenue identification of the parcel, title or proposed lease, map and access details. Ask the planning professional to locate the land against the applicable development plan and planning controls. A nearby factory or a broker's description of "industrial potential" is useful context, but it is not evidence of permission for your project.

Describe what will happen on the land. Manufacturing, storage, retail, a plotted development and a mixed-use facility raise different planning questions. A change in activity can matter even when the plot boundaries stay the same.

For an expansion, identify whether the new work lies inside the land and use already covered by existing approvals. For a rented facility, obtain the landlord's approvals early and compare them with your intended occupation. The [site due-diligence article](#) explains this pre-commitment check in more detail.

Which authority handles CLU in Haryana?

The Department of Town and Country Planning and Urban Local Bodies have relevant responsibilities under their respective jurisdictions and delegations. Do not select an application portal from the district name alone. Municipal boundaries, controlled-area status, land category and proposal type can affect the route.

The official [ULB Right to Service list](#) identifies a CLU service for specified sites and links its procedure. Confirm that the parcel falls within the stated service before relying on the document checklist or processing standard. Keep the jurisdiction finding in the project file so later design and approval work use the same starting point.

Organise the information in four groups

Information	Why it matters
Applicant and land relationship	Establishes who is applying and the basis on which they control or propose to use the site
Revenue and parcel records	Allows the land description, area and location to be matched across records
Intended use and site plan	Allows the authority to assess the actual proposal against planning requirements
Access and related permissions	Identifies requirements that depend on the site's location and activity

The published ULB procedure refers to CLU Form I, identity and ownership records, site material and applicable NOCs. Use its detailed list only after checking the current route. Prepare readable scans and a document index. Flag a name, parcel-number or area discrepancy for resolution instead of silently choosing whichever version is easiest to upload.

How does the application generally progress?

The practical sequence is site and jurisdiction review, preparation of the required application and plans, submission, scrutiny and responses, followed by the authority's decision and compliance with its conditions. In the ULB procedure, an approved proposal moves through a Letter of Intent and compliance before the CLU permission letter is issued. A submission acknowledgement or Letter of Intent should not be described as final permission.

Assign someone to monitor requests for clarification and retain the submitted version of every document. If the project changes during scrutiny, review the effect on plans, costs and other applications before replying. Your architect, land adviser, finance team and project owner should be working from the same intended use and site area.

CLU, building plans and access are different questions

CLU addresses land-use permission. [Building Plan Approval](#) addresses the building proposal. [Occupation Certificate](#) concerns the relevant completion or occupation stage. Depending on the site and activity, [NHAI access permission](#), [PWD entry and exit permission](#), [Fire Department Permission](#) or [Consent to Establish](#) may also need review.

These links are possible dependencies, not a universal checklist. A site adjoining a highway does not necessarily have authorised direct access. A pollution consent does not establish land-use permission. Each decision should come from its proper authority.

What determines CLU cost and time?

The cost assessment can include scrutiny, conversion and development-related charges where applicable, together with plans, surveys and professional work. The official procedure itself distinguishes different charges. A single statewide package price would hide important site differences.

Authority service standards should be read with their conditions, including receipt of complete documents. The overall project period also includes resolving title or plan issues, obtaining relevant inputs and complying with conditions. Seek a staged estimate with dependencies rather than treating the advertised processing period as a guaranteed construction date.

Common questions

Is CLU required for every industrial plot?

The answer depends on the land's approved status and the proposed use. An existing industrial allotment or permission needs to be read, not assumed to cover every activity or expansion.

Can an old CLU letter be used for a new proposal?

Compare its land description, approved use, validity and conditions with the new proposal. A different applicant, layout or activity may require further action.

What should I share for the first discussion?

Start with the site location, available land documents, proposed activity and project stage. Share existing permissions if you have them. Missing records can be identified during the discussion.

Connect the site decision to the investment

A factory or warehouse project brings land, building, equipment and funding decisions together. Our [Manufacturing](#) and [Commercial & Logistics](#) pages explain how Rapid coordinates those requirements around the project.

If you are also considering incentives for the investment, [Subsidy Advisory](#) is a separate assessment of the activity, expenditure and dates. A CLU permission does not establish subsidy eligibility.

Move the site decision forward

If you are comparing support for the application, read [what a Haryana CLU consultant should coordinate](#) to define the work and specialist responsibilities.

Rapid's [Change in Land Use \(CLU\) Approval](#) service is the route for project-specific documentation and coordination support in Haryana. [Discuss your project](#) and an expert consultant from Rapid will call you about the site and next stage.
