

Before buying or leasing land: check the proposed use

DRAFT FOR REVIEW | GUIDE | B047

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

Before buying or leasing a site for a Haryana project, establish whether the land and building can support the intended use. A clear title, available electricity and a nearby factory answer different questions. None alone confirms the proposed factory, warehouse or commercial activity can proceed.

The practical goal is a documented site decision: what is established, what needs permission and what remains unresolved before the commitment.

Describe the project before assessing the site

Write a short statement of the activity, process, storage, building needs and likely movement of people and vehicles. Separate today's operation from future expansion. The planning review should assess that proposal rather than a vague label such as "commercial purpose".

For a recycling project, inputs and process can materially affect the requirements. For a warehouse, goods and access may matter as much as area. Company turnover does not describe either site's technical complexity.

Match the physical land to the records

Obtain the available ownership or lease documents, revenue identification, maps and existing permissions. Have the appropriate professionals check the parcel, area and boundaries against the land being offered. Do not rely on a location pin alone to identify the legal parcel.

If the proposal uses only part of a larger holding, show that clearly. Access, shared services and the right to carry out work may need specific arrangements with the owner or other occupiers.

Establish the planning position

Identify the relevant authority, development-plan position and existing approved use. Check whether CLU or another route is needed for the proposal. Haryana ULB's published procedure illustrates the importance of ownership, site information and applicable permissions within its jurisdiction. [Official ULB CLU procedure](#).

A site may already have an approval, but its conditions, land coverage and use need to be read. The word "approved" in a sales brochure does not tell you whether the approval is relevant to your project.

Inspect access and the building assumptions

A road beside the site does not automatically permit the desired entry and exit arrangement. Review the road authority and any required access permission. Existing access for one use may not settle the requirements of a changed development.

For a built premises, compare approved and actual layouts. Ask for the relevant building, occupation and fire records. Identify alterations rather than assuming the landlord's latest photograph matches an approved plan.

Use a conditional decision record

Finding	Decision consequence
Intended use is established as permitted	Retain the supporting approval and conditions
A permission route is identified	Plan the application, dependencies and costs
A material fact is missing	Resolve it before treating the site as ready
The proposal conflicts with a requirement	Reconsider the site or proposal through the proper route

Illustrative situation: a business can afford the lease but cannot yet establish lawful access for heavy vehicles. The site decision should recognise that dependency before the machinery delivery date is fixed.

Connect the checks to the commercial commitment

Ask the relevant legal professional how unresolved findings should be reflected in the purchase or lease documentation. Planning support does not replace title or contract advice. Put an owner and next action against each material gap so the decision can progress.

Does an industrial neighbour prove this plot can be industrial?

No. Review the exact parcel and proposed use under the relevant framework.

Can a lease remove the need for CLU review?

No automatic conclusion follows from leasing. The land's approved position and intended activity still matter.

Where does the application process begin?

Read [Change of Land Use in Haryana](#) once the proposal and site have been identified.

Rapid's [Land Planning & Value Unlocking](#) and [CLU Approval](#) pages provide relevant service routes. [Discuss your project](#) and an expert consultant from Rapid will call you about the site decision.
