

Testing Equipment Assistance in Haryana

DRAFT FOR REVIEW | SCHEME | D004

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

Haryana's 2021 Testing Equipment Assistance Scheme supported equipment used to check raw materials or finished products. For a manufacturer, the practical value is stronger control over product quality through an in-house testing capability. The equipment's testing function matters more than a supplier describing it as a "quality machine".

The Haryana Testing Equipment Assistance Scheme notified on 8 June 2021 provided support for qualifying MSMEs. It should be distinguished from reimbursement of an external laboratory's test charges and from assistance for obtaining a quality certificate.

Policy period and present-day use

This explanation covers the notification issued under HEEP 2020. Haryana notified its Progressive MSME & Export Promotion Policy on 29 July 2026, expressly superseding HEEP 2020. An older claim and a new investment therefore need separate checks of the transition provisions, relevant dates and operative scheme instructions. The historic benefit below should not be entered as an assured receipt in a new project budget.

What the notified assistance covered

The 2021 scheme provided 50% support for the purchase of testing equipment, subject to a maximum of ₹20 lakh per year. It excluded second-hand testing equipment. The unit had to be in commercial production, meet the scheme's registration and other eligibility conditions, and remain in regular production at disbursement.

The purchased equipment was to be retained for five years without disposal unless the competent authority approved it. This makes the asset register and continuing physical availability important after the initial claim, not just at purchase.

Explain the measurement the equipment performs

A strong file identifies the raw material or product being tested, the property measured, the relevant production stage and the equipment's technical specification. If one machine performs both production and testing tasks, describe those functions clearly instead of assuming the full price has the same treatment.

Keep the purchase order, invoice, payment evidence, installation records and equipment identification together. Technical brochures help explain the function; they do not replace purchase and payment evidence. Udyam and HUM details, applicable approvals and commercial-production records should agree with the applicant and site shown in the claim.

The original scheme required a complete claim within three months of purchase or notification, whichever was later. Its specified purchase period and any later extensions must be read alongside

the 2026 policy transition. An existing claim should retain its original submission acknowledgement and all subsequent correspondence.

Claim process

The notified route was an online application to the Directorate of MSME, followed by District MSME Centre scrutiny and inspection. The inspection connects the documents to the actual equipment at the unit. Clarifications should answer the particular technical or cost issue raised, with consistent invoices and records.

Does a production machine qualify because it improves quality?

Improving quality is not enough by itself. The application needs to establish that the proposed asset is testing equipment within the applicable scheme.

Is a quality certificate part of the same claim?

A certificate and a testing asset are different expenditure heads. See [Quality Certification Assistance](#) for the separate topic and assess any overlap in funding before claiming.
