

Haryana Textile Park Scheme

DRAFT FOR REVIEW | SCHEME | D015

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

Haryana's Textile Park Scheme supports the development of a location where multiple textile manufacturers can operate with planned infrastructure. The applicant's role is the park promoter or developer. An individual textile factory has a different subsidy assessment, even when it will occupy land in the park.

The July 2023 scheme sits under the Haryana AatmaNirbhar Textile Policy. A May 2025 notification extended that policy and its schemes to 18 December 2026. This policy period does not, by itself, confirm approval capacity or an open submission facility for every park proposal.

What makes a qualifying park?

The notified model requires at least 20 acres in a B, C or D category block, at least 10 manufacturing units and the prescribed aggregate fixed-capital investment of ₹30 crore. Location, the participant mix and the nature of manufacturing therefore matter before detailed infrastructure costs are prepared.

The developer should establish a coherent layout: industrial plots or premises, access, power, water, drainage and treatment facilities must serve the proposed occupiers. Land ownership and permissions need to support the intended development and use.

What support does the notification describe?

The scheme provides specified relief on stamp duty and internal development charges, together with support for a qualifying common zero-liquid-discharge facility. The latter is a contribution towards eligible facility cost, with land excluded; it is not a subsidy on all land and construction expenditure in the park.

The July 2023 notification sets out 50% assistance for the common ZLD facility, capped at ₹10 crore. Its technical scope, common use and approved expenditure must be established. The developer should keep this cost schedule separate from infrastructure sold or leased with individual plots.

Evidence and implementation

Prepare the title or tenure documents, block classification, master plan, participating-unit details and their proposed investment. Treatment-facility design should connect to the effluent quantity and characteristics of the proposed industries, along with the approvals needed for operation.

The application and sanction must identify who creates, owns and maintains the common assets. A development business case should also explain how maintenance and treatment costs will be recovered from occupiers. Approval of an incentive does not replace planning or environmental permissions.
