

Agricultural Marketing Infrastructure Scheme

DRAFT FOR REVIEW | SCHEME | D021

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

The Agricultural Marketing Infrastructure scheme, or AMI, supports eligible agricultural storage and marketing infrastructure through a credit-linked subsidy route. The lender's role is central: financing, project assessment and subsidy processing must connect to the same eligible project.

For a new investment, the present application position matters before any historical subsidy rate. NABARD's Circular 149 placed implementation in abeyance with effect from 10 June 2025 because the available budget had been utilised. The circular suspended new sanctions and processing of pending subsidy claims until further orders and described the ENSURE portal as temporarily disabled for this purpose.

That is a dated official position. A later resumption has not been established for this explanation. Obtain the latest instructions from the financing bank and the implementing authorities before including AMI receipts in a project's funding plan.

What to assess in a storage project

The project's purpose must fit agricultural marketing infrastructure. Establish the commodities, storage method, capacity, catchment and intended users. A building used for general commercial warehousing should not be assumed to qualify because it has the same floor area as an agricultural godown.

For a viable proposal, the capacity and specification should follow expected commodity flows. Land access, loading arrangements, handling losses, ventilation or temperature requirements, and fire and other permissions affect the project even before subsidy eligibility is considered.

Keep the loan and subsidy calculations separate

The bank assesses whether it can finance the project and on what terms. Subsidy eligibility concerns the scheme's applicant category, components, cost norms, dates and procedure. A term-loan sanction is not itself a subsidy approval, and a published subsidy rate does not oblige a lender to finance the investment.

Prepare the land records, layout, capacity calculation, itemised cost estimate, quotations, proposed utilisation and loan appraisal. For an existing project, add the sanction and disbursement dates, completion records, previous subsidy submissions and correspondence with the bank.

If a claim is already pending

First establish its actual stage: submitted through the lender, acknowledged by the implementing system, sanctioned, inspected or awaiting release. The June 2025 circular affects processing; it does not justify inventing a new release date. The lender's latest written position is more useful than treating all pending claims as identical.

Read [NABARD Circular 149 on AMI abeyance](#). Compare [Agriculture Infrastructure Fund](#) only through its own eligibility and programme-period rules; it should not be treated as an automatic replacement grant.

Discuss the next step

For help assessing the project and preparing the applicable subsidy work, see [Subsidy & Incentive Advisory](#).
