

Capital Subsidy for Electric Vehicle Manufacturing

DRAFT FOR REVIEW | SCHEME | D026

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

Haryana's EV capital-subsidy provision concerns qualifying investment in manufacturing electric vehicles, specified components, batteries and charging infrastructure. It is not a general capital subsidy for every Haryana business, and buying an EV for business use is a different incentive question.

Establish what the unit manufactures

The 2022 policy defines EV components and restricts the manufacturing incentives to the relevant exclusive EV or charging-infrastructure use. A component supplier should explain the product, technical function, customer use and manufacturing process. A general-purpose product should not be classified as an EV component simply because one customer is in the automotive sector.

Capital support varies by enterprise category and includes limits on early beneficiaries. The policy treats battery disposal and recycling facilities separately. It also prevents a unit taking the capital benefit from claiming the specified net-SGST investment benefit under the same policy.

Prepare the investment case

Build an itemised investment schedule and identify land, building, machinery and other expenditure separately. Keep registrations, product specifications, equipment quotations, ownership details, site records and the production schedule consistent. For an existing enterprise, the additional-investment or complete-conversion conditions must be checked against its actual baseline.

The policy also contains location and category-specific environmental infrastructure conditions. Identify these before choosing a site or finalising the financial model. The application should then follow the operative scheme route with the prescribed certified investment evidence, rather than using a policy table as an approval.

Can the capital and SGST incentives simply be added together?

The policy expressly restricts that combination. Compare the applicable options using the same project assumptions before selecting a benefit. See [EV Net SGST Reimbursement](#).

Policy source and application status

The [notified Haryana Electric Vehicle Policy, 2022](#) establishes this assistance category. Its stated five-year period and the existence of a policy provision do not establish that a particular application slot remains available. Check the operative scheme notification, amendments and departmental application instructions before committing expenditure on the expectation of support.

Discuss the next step

For help assessing the project and preparing the applicable subsidy work, see [Subsidy & Incentive Advisory](#).
