

Human Capacity Building: EV Centres of Excellence

DRAFT FOR REVIEW | SCHEME | D033

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

The Haryana EV policy's Centre of Excellence provision supports institutions that can develop skills for the electric-vehicle manufacturing sector. It is an institutional project, rather than a cash payment to each trainee or an ordinary reimbursement of a company's training bill.

The policy encourages government organisations, PSUs and private companies to establish such centres. It envisages a limited number of supported centres, with a grant divided between establishing the facility and sustaining operations.

Show how the centre will serve industry

A credible proposal identifies the skills gap, intended learners, training and technical facilities, industry relationships and how the centre will remain useful after setup. Equipment should follow that operating plan. A list of expensive machines without courses, instructors or a user base does not explain the centre's purpose.

The policy specifies grant support of 50% of project cost, capped at ₹5 crore for each of five centres. It also describes the split between establishment and operating use and release through annual instalments. The detailed scheme must settle which proposed costs qualify and the conditions attached to release.

Prepare the institution and delivery evidence

Collect the applicant's constitution, governing-body approval, site rights, technical proposal, budget and financing plan. Explain who will own and operate the centre, how trainers will be engaged, which organisations will use it and how outcomes will be recorded. Identify other funding for the same facilities.

The next step is to establish the current selection route and available allocation, then submit the prescribed proposal and answer technical or financial questions. An announced centre and an approved, funded centre are different project states.

Is this the same as an EV R&D grant?

No. Skills and workforce capability are the purpose here. [EV R&D support](#) addresses the separate research proposal and its technological objectives.

Policy source and application status

The [notified Haryana Electric Vehicle Policy, 2022](#) establishes this assistance category. Its stated five-year period and the existence of a policy provision do not establish that a particular application slot remains available. Check the operative scheme notification, amendments and departmental application instructions before committing expenditure on the expectation of support.

Discuss the next step

For help assessing the project and preparing the applicable subsidy work, see [Subsidy & Incentive Advisory](#).
