

National Horticulture Board Project Assistance

DRAFT FOR REVIEW | SCHEME | D038

Designated reviewer: Atul Goyal. Review pending. PDF prepared 18 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

National Horticulture Board assistance includes distinct routes for commercial horticulture and cold-storage projects. The activity, technical design, capacity, financing and applicable guideline determine how a proposal is assessed. "NHB subsidy" is not one rate that can be applied to every horticulture investment.

NHB's official guideline page lists an amendment dated 21 August 2026 and marks the January 2025 operational guideline as under revision. A new project should establish the operative amended provisions before fixing its eligible cost or purchasing schedule.

Select the component before estimating assistance

Describe the crop or commodity, proposed activity, area or capacity, technology and location. A protected-cultivation project, a commercial production project and a cold-storage facility need different technical and cost assessments.

The MIDH framework also distinguishes the NHB route from state horticulture-mission components. Two projects handling the same crop can fall under different routes because their scale or activity differs. The responsible agency should be established before the application is prepared.

Build a technically coherent proposal

For production, connect the proposed area, crop cycle, planting material, irrigation and expected output. For a cold store, connect commodity, chamber design, temperature, capacity and handling arrangements. Machinery quotations and civil estimates should follow that design rather than determine it.

Prepare land and tenure evidence, applicant records, the project report, itemised costs, financing and the permissions relevant to the investment. The eligible-cost working must distinguish commercial expenditure from the costs recognised under the applicable component and norms.

Coordinate the project and lending records

NHB publishes Letter of Comfort and Grant of Clearance requirements, alongside bank-linked subsidy-claim and inspection formats. Confirm which steps apply to the selected component and project stage. A bank's loan decision and NHB's scheme decision have different purposes and should be tracked separately.

During implementation, preserve the original approved scope, expenditure and banking evidence, progress and completion records. The final claim should be reconcilable with the assets and activity that can be inspected. Disclose assistance under other horticulture or government programmes so that the same investment is not presented inconsistently.

For an older sanction, retain the original guideline version and any project-specific amendments. A later published cost norm should not automatically be substituted into a historic approval.

Use the [NHB guideline and application requirements page](#) to establish the current source set. See [NHM under MIDH](#) for the separate state-mission context.

Discuss your horticulture or cold-storage investment

Tell us the crop or commodity, the proposed activity, location, area or capacity, and approximate investment. Include the stage of any bank proposal or existing NHB application so the discussion starts with the work you actually need.

Rapid's [Subsidy & Incentive Advisory](#) covers the relevant assessment and application work. For connected processing and storage requirements, explore [Food & Agro Processing](#).

[Discuss your project](#). An expert consultant from Rapid will call you to understand the requirement and explain the proposed work and next steps.
