

Primary Processing Centre: Identifying the Right Support Route

DRAFT FOR REVIEW | SCHEME | D048

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

A primary processing centre is a facility description. It can refer to a place where agricultural produce is collected, cleaned, sorted, graded, packed or handled before further processing or sale. The proposed operations determine which support programme, if any, can apply.

The name "Primary Processing Centre Scheme" is not enough to identify a single verified national or Haryana benefit. A project needs an exact programme, notification and current application route before a grant percentage can be calculated.

Describe what happens at the centre

Begin with the incoming commodity, suppliers, seasonal volumes and the condition of the product leaving the facility. List each operation and the equipment required. Distinguish handling and primary processing from manufacture of a finished food product.

Then identify the business model. A producer-owned facility serving members, a commercial service centre and a processor's collection point may have different applicant and financing conditions even if they use similar equipment.

The programme history matters

[MoFPI's central Backward and Forward Linkages scheme](#) included primary processing and collection centres, but it was discontinued from 1 April 2021. Its historic description does not establish a fresh route today.

[AMI](#) also needs a current status check: NABARD placed implementation in abeyance from 10 June 2025, pending further orders. The [Agriculture Infrastructure Fund](#) has its own eligible-activity and programme-period conditions. These programmes should be assessed individually rather than combined into a generic PPC subsidy promise.

Prepare a project that can be mapped accurately

Create a process flow and capacity schedule, identify the site and land tenure, and separate equipment, civil works, utilities, transport and working capital. Add the applicant's constitution, proposed users or buyers and the financing plan. Explain whether the project is new, already purchased or part of an earlier approval.

Those records allow an adviser to test an actual component against a programme's rules and identify any timing or overlap issue before expenditure is committed. They also provide a sound basis for the lender's appraisal, even where no subsidy route is presently established.

Read [MoFPI's historic linkage-scheme scope](#) and [NABARD's AMI status circular](#). For a project that creates substantive food-processing capacity, the separately defined [CEFPPC scheme](#) may be a more

relevant question to examine.

Discuss the next step

For help assessing the project and preparing the applicable subsidy work, see [Subsidy & Incentive Advisory](#).
