

Seed and Conversion Fund for EV Manufacturing

DRAFT FOR REVIEW | SCHEME | D054

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

The Seed and Conversion Fund in Haryana's EV policy supports the complete conversion of an existing unit into EV, EV-component or EV-battery manufacturing. Despite the word "seed", this provision is not a general early-stage start-up fund.

Its policy-level benefit is linked to the book value of plant and machinery in the application year, subject to a percentage and ceiling. Book value is an accounting measure and is different from a supplier's replacement quotation or the original purchase price of the assets.

Establish that a complete conversion is taking place

The proposal needs to show what the unit manufactured before, what it will manufacture afterwards and which assets and processes support the new activity. A small additional EV order in an otherwise unchanged general manufacturing business does not establish complete conversion.

The 2022 policy sets limits on early adopter units within enterprise categories. It also contains location, eligible-product and other manufacturing conditions. The relevant implementing scheme must determine whether the proposed conversion and the timing satisfy those requirements.

Prepare the before-and-after evidence

Keep audited accounts and the plant-and-machinery register for the relevant year, depreciation schedules, the conversion plan, product specifications, equipment records and evidence of the old and new production activities. Reconcile the asset values and identify disposals, additions or transfers rather than using an unexplained total from the balance sheet.

Map other assistance claimed on the conversion to avoid overlapping claims under similar state-policy heads. Confirm current quota availability, the application trigger and required certification before submitting the conversion claim.

Can a new factory use this provision instead of capital subsidy?

The conversion fund is framed for existing units converting completely. A new factory needs assessment under the appropriate [EV capital-assistance provision](#).

Policy source and application status

The [notified Haryana Electric Vehicle Policy, 2022](#) establishes this assistance category. Its stated five-year period and the existence of a policy provision do not establish that a particular application slot remains available. Check the operative scheme notification, amendments and departmental application instructions before committing expenditure on the expectation of support.

Discuss the next step

For help assessing the project and preparing the applicable subsidy work, see [Subsidy & Incentive Advisory](#).
