

Water Treatment Incentives for EV Manufacturing

DRAFT FOR REVIEW | SCHEME | D059

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

This water-treatment incentive is a provision of Haryana's Electric Vehicle Policy, 2022. It concerns water recycling for qualifying manufacturing plants, rather than a universal subsidy for every water-treatment installation in Haryana.

The policy provides for reimbursement of 50% of the water-treatment plant cost, capped at ₹50 lakh, for a limited number of early units in the medium, large, mega and ultra-mega categories. An MSME label alone is not sufficient: the stated policy categories and the individual implementing scheme must be checked.

Explain the water system being installed

Identify the manufacturing process, water intake, wastewater generated, treatment stages and intended reuse. A treatment plant, storage tank, water-softening system and a general plumbing upgrade do not necessarily have the same function or scheme treatment.

The application should connect each claimed cost to the qualifying treatment facility. Keep a technical flow diagram and capacity basis with the equipment specification and civil-work schedule. The authority's assistance decision is separate from pollution-control compliance and does not replace required consents or operating standards.

Records for the claim

Prepare the unit's product and registration evidence, project category, site documents, treatment design, invoices, payment trail, installation and commissioning records, and any required professional certification. Identify prior support for the same plant and retain the relevant environmental approvals.

Check the current early-beneficiary position and application trigger before relying on reimbursement. For an installed plant, preserve the commissioning date and original submission records so the claim can be assessed against the right version and deadline.

Is any ETP eligible under this EV provision?

No. The enterprise and the facility must fit the applicable EV-policy scheme. Other industries need their own environmental or water-assistance assessment.

Related work

For the project's environmental and approval requirements, see [Approvals & Compliance](#). For electronic-waste recovery in the ESDM sector, use the separate [Electronic Waste Management Assistance](#) explanation. That scheme does not cover every waste-management asset.

Policy source and application status

The [notified Haryana Electric Vehicle Policy, 2022](#) establishes this assistance category. Its stated five-year period and the existence of a policy provision do not establish that a particular application slot remains available. Check the operative scheme notification, amendments and departmental application instructions before committing expenditure on the expectation of support.

Discuss the next step

For help assessing the project and preparing the applicable subsidy work, see [Subsidy & Incentive Advisory](#).
