

Electricity Duty Exemption in Haryana

DRAFT FOR REVIEW | SCHEME | D005

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

Under Haryana's HEEP 2020 notification, electricity duty exemption reduced or removed the electricity-duty component for an eligible enterprise. It does not mean free electricity, and it does not by itself remove energy charges, demand charges or other items on a power bill.

Haryana's June 2021 HEEP notification provided different exemption periods for enterprise and sector categories. The practical starting point is to identify the applicable category, the site's block and the date from which the exemption could run.

Policy period and present-day use

This explanation covers the notification issued under HEEP 2020. Haryana notified its Progressive MSME & Export Promotion Policy on 29 July 2026, expressly superseding HEEP 2020. An older claim and a new investment therefore need separate checks of the transition provisions, relevant dates and operative scheme instructions. The historic benefit below should not be entered as an assured receipt in a new project budget.

Why one exemption period does not fit every unit

The notification distinguished MSMEs, large and mega projects, thrust sectors, specified services and other categories. For example, ordinary manufacturing MSMEs had a different period from the listed service enterprises. A firm's size or Udyam registration alone did not establish which line of the notification applied.

An exemption also needs the correct electricity connection. The meter, consumer account, enterprise name and industrial site should align with the application. If an expansion uses an existing connection, establish what investment and consumption the approval actually covers.

Prepare the consumption and project record

Collect the electricity bill and connection details, commercial-production evidence, applicable registration records, block identification and relevant project approvals. Bills should show the duty charged separately so that the claimed treatment can be checked. Preserve any earlier exemption order and the period it specifies.

For a running unit, reconcile the order with subsequent bills and raise a supported query where the treatment differs. For a new project, first establish which current notification applies and the authority's application requirements. Do not assume an old approval for another unit transfers with a property or power connection.

Is electricity duty the same as the power tariff?

No. Tariff and duty are distinct bill components. A tariff assistance scheme and duty exemption must be assessed and recorded separately.

Does every B, C or D block project get the same benefit?

No. The historic notification also used enterprise and sector categories. The applicable classification and dates must be proved.
