

Fire Equipment and Safety Compliance Assistance

DRAFT FOR REVIEW | SCHEME | D007

Designated reviewer: Atul Goyal. Review pending. PDF prepared 18 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

A fire-equipment subsidy enquiry should begin with the safety work being carried out and the scheme that covers it. Haryana's 8 June 2021 Safety Compliance Scheme supported safety audits and qualifying capital equipment or expenditure for safety measures. The official title is broader than "Fire Equipment Subsidy".

Buying an extinguisher, installing a fire system and completing a safety audit are different actions. A scheme claim needs to explain the expenditure and how it meets the applicable notification. It also needs to remain separate from obtaining a fire approval or maintaining required safety arrangements.

Policy period and present-day use

This explanation covers the notification issued under HEEP 2020. Haryana notified its Progressive MSME & Export Promotion Policy on 29 July 2026, expressly superseding HEEP 2020. An older claim and a new investment therefore need separate checks of the transition provisions, relevant dates and operative scheme instructions. The historic benefit below should not be entered as an assured receipt in a new project budget.

The benefit had two parts

Under the 2021 notification, safety-audit reimbursement was 75% of eligible expense, capped at ₹1 lakh. Assistance for qualifying safety capital equipment and expenditure was 50%, subject to different caps for A, B, C and D blocks, once in five years. The capital ceiling therefore cannot be stated correctly without the unit's block category.

The notification linked the safety-audit benefit to implementation of the audit recommendations. It specified an audit by auditors of an ISO-certified agency, new safety investment and an operating MSME that met the registration and applicable approval conditions. An audit report left without action did not meet the stated basis for audit assistance.

Prepare the audit-to-investment record

The useful starting point is the audit report and its recommendations. Link each claimed item to the safety issue it addresses, then show the approved specification, invoice, payment and installation. Record which recommendations have been completed and which remain outstanding.

For a fire-safety system, equipment descriptions should identify the actual installation, not only a bundled supplier amount. Civil work, equipment and professional services may need separate treatment. The safety professional's design and implementation records provide context for the claim; government incentive approval does not certify that the facility is safe.

The original notification required a complete claim within three months of the relevant audit or equipment event, or notification, whichever was later. Project chronology and any earlier submission

therefore matter. District scrutiny and site inspection form part of the notified process.

Questions owners ask

Does a fire NOC create subsidy eligibility?

No. A fire approval and financial assistance have different requirements. The approval may be relevant evidence, but it does not replace the scheme's applicant, activity and expense conditions.

Can I claim all fire-system costs under one percentage?

The eligible expenditure and block-based cap must be established first. A quotation total is not automatically the accepted cost base.

Official sources and related support

Read the [Safety Compliance Scheme notification](#) and the [July 2026 policy notification](#). For the approval work itself, see [Approvals & Compliance](#).

See the work in a project context

Our [Hisar safety-equipment case](#) describes subsidy-related application work around approximately ₹30 lakh in recorded new safety-equipment expenditure. The figure describes the investment, not a subsidy amount, and the case retains its evidence note. It is an example of the work, not confirmation that a new project qualifies.

Discuss your safety-investment requirement

Tell us where the unit is located, which safety work is proposed or completed, its approximate cost and the main audit, purchase and installation dates. If a claim has already been filed, mention its current stage.

Rapid's [Subsidy & Incentive Advisory](#) covers assessment and agreed application support. If the immediate need is an approval or certificate, go to [Fire Department Permission](#).

[Discuss your project](#). An expert consultant from Rapid will call you to understand the requirement and explain the proposed work and next steps.
