

Haryana Textile Cluster Development Scheme

DRAFT FOR REVIEW | SCHEME | D016

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

Textile businesses can share equipment and services that would be difficult for each unit to finance and operate alone. Haryana's Textile Cluster Development Scheme provides a route for a qualifying group of textile MSMEs to establish a common facility centre.

The scheme is collective: the member units use the facility, while a dedicated organisation develops and operates it. Buying a machine for one member's factory does not become a cluster project simply because other businesses support the application.

Membership and ownership

The July 2023 notification requires a group of at least 15 textile MSMEs within the prescribed 50-kilometre area, which may extend across Haryana districts. The special purpose vehicle, or SPV, must be constituted as a Section 8 not-for-profit company under the scheme.

This legal form matters. Member contributions, ownership of assets, access to facilities and continuing management should sit within that entity's approved arrangements. The member list should identify operating units, products, addresses and the need each member has for the proposed common service.

Assistance follows an approved common need

The scheme provides for 90% state contribution and 10% SPV contribution for an eligible common-facility project costing up to ₹10 crore. Upgradation of an existing common facility may also be considered within the notified conditions. These figures apply to the approved project, not to every expenditure proposed by the members.

Start with a diagnostic assessment of the cluster. It should explain the shared constraint, expected users, required capacity and how the facility will improve the members' operations. Testing, processing or other equipment should be selected against this need, supported by technical specifications and costs.

Build the operating model before the application

The SPV needs to demonstrate land arrangements, member contribution, management capability and a plan to keep the facility running. User charges, staffing, maintenance, utilities and replacement costs should be addressed in the project report. A common facility that cannot recover operating costs can become a liability for its members.

The notification includes a requirement to make the centre functional within two years of final approval. Procurement, construction and permissions therefore need a workable sequence. Keep member resolutions, payments, procurement records and progress evidence aligned with the sanctioned project.

The textile policy and its schemes were extended to 18 December 2026. Verify the current application process and project availability separately. Read the [Textile Cluster Development notification](#) and [policy extension](#). The wider [MSE Cluster Development Programme](#) and Haryana [Mini Cluster scheme](#) have their own rules and should not be mixed into this calculation.

Discuss the next step

For help assessing the project and preparing the applicable subsidy work, see [Subsidy & Incentive Advisory](#).
