

Haryana Boiler Conversion Assistance

DRAFT FOR REVIEW | SCHEME | D023

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

Haryana's boiler-conversion assistance was introduced to help qualifying MSMEs in the state's NCR area move boilers from coal or diesel to PNG, CNG or the cleaner fuels specified in the scheme. The support relates to the conversion project, including eligible material and service costs.

The March 2023 notification describes a two-year scheme period beginning on 23 June 2022. That historic period must be checked against any subsequent extension before a new conversion is budgeted with a subsidy. The continuing need to comply with applicable fuel directions is a separate matter.

What the notified support covers

The scheme provides assistance at 30% of eligible conversion expenditure, capped at ₹15 lakh. Its scope concerns existing MSMEs in Haryana's NCR area and the conversion-related equipment or installation recognised by the notification. It is not a general grant for every new boiler anywhere in Haryana.

A technical assessment should establish the existing fuel, boiler configuration, proposed fuel supply and the work required. Separate the conversion package from unrelated capacity additions or factory expenditure. The supply quotation should make that distinction visible.

Prove the change in equipment and fuel

Retain the original boiler particulars, unit registration, location evidence, fuel-supply arrangements, conversion specifications and itemised invoices. Banking records should show the expenditure paid. Commissioning and technical verification should connect the completed work to the proposed cleaner-fuel operation.

A project may also require changes to permissions, safety certification or operating arrangements. Subsidy eligibility does not itself establish compliance with those requirements. Assess both processes before committing to the final equipment design.

For an older claim, assemble the dates of conversion, commercial use, payment and submission together with any acknowledgement or sanction. Those dates determine which notified period and procedure need examination.

Read the [March 2023 Boiler Conversion notification](#). The separate [VAT assistance for cleaner fuels](#) concerns fuel expenditure under its own rules, so the two calculations should remain distinct.

Discuss the next step

For help assessing the project and preparing the applicable subsidy work, see [Subsidy & Incentive Advisory](#).
