

MoFPI Integrated Cold Chain and Value Addition Infrastructure

DRAFT FOR REVIEW | SCHEME | D027

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

MoFPI's Integrated Cold Chain and Value Addition Infrastructure scheme supports a connected processing and temperature-controlled supply chain. The May 2025 revised guideline has a specific scope: non-horticulture products such as dairy, meat, poultry, marine products and fish, with shrimp excluded.

A cold room alone does not establish eligibility. The project needs the required processing and linked infrastructure, designed around the product's movement through the chain. Older descriptions covering a wider product range should not be used in place of the May 2025 rules.

Show how the chain connects

The guideline describes farm-level infrastructure, mandatory processing facilities and the required distribution or transport connections. The application should explain where the raw material comes from, what processing takes place, how temperature is maintained and how finished products reach the market.

Map the capacity of each part. Collection, processing, storage and transport should be proportionate to each other and supported by realistic supply and sales assumptions. A disconnected collection of equipment does not demonstrate an integrated project.

The 2025 guideline excludes expansion or upgradation of an existing project under this route and restricts repeat proposals from entities already assisted under the cold-chain scheme. An applicant's previous grant history therefore belongs in the first eligibility assessment.

Grant structure and expenditure timing

The guideline provides assistance at 35% of eligible project cost in general areas and 50% in difficult areas and for qualifying SC/ST, FPO and SHG projects, capped at ₹10 crore. Rates apply to approved eligible components and relevant cost norms, not automatically to total project expenditure.

It expressly excludes expenditure on eligible components incurred before the Ministry issues the approval letter. The purchase and payment schedule is therefore a funding decision: even a technically suitable machine may fall outside the grant if expenditure occurs too early.

Term-loan, promoter-contribution and net-worth conditions also apply. Category concessions have their own evidence requirements and should be checked separately for each condition. Land, excluded costs and operating finance still need to be funded.

Prepare for appraisal and implementation

Assemble the applicant's ownership and financial records, land documents, process layout, machinery quotations, temperature and capacity specifications, supply arrangements, bank appraisal and funding commitments. Identify the permissions and utilities required for the proposed products and operations.

Applications depend on an applicable EOI and selection. The guideline is not evidence that a fresh window is open. After approval, align procurement and payments with the sanctioned scope, maintain progress and expenditure records, and meet the release conditions. Assistance from another programme cannot duplicate the same component or activity.
