

National Horticulture Mission under MIDH

DRAFT FOR REVIEW | SCHEME | D039

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

The National Horticulture Mission, or NHM, is a sub-scheme of the Mission for Integrated Development of Horticulture. It supports horticulture development through the state-mission framework, with different provisions for production, planting material, protected cultivation and post-harvest infrastructure.

For a Haryana applicant, the practical question is which component the state is implementing for the proposed activity and period. A national cost norm does not, by itself, establish an open local application opportunity or a sanctioned allocation.

The component determines the benefit

The MIDH guidelines cover a broad range of horticultural crops and activities. A nursery, a protected-cultivation structure, a pack house and a cold store are assessed against different technical requirements and assistance norms.

The government-to-government funding share for a state programme is not the subsidy percentage payable to an individual applicant. The beneficiary's assistance must come from the relevant component's cost and assistance provisions.

Match the facility to the horticulture activity

For a post-harvest project, specify the commodity, seasonal volume, handling stages and required capacity. The 2025 framework includes activities such as grading, packing, pre-cooling, storage, ripening and refrigerated movement, with conditions on their design and integration.

Entrepreneur-driven post-harvest projects generally use a credit-linked, back-ended structure under the framework. Specified public or collective applicants have different provisions. Applicant form should therefore be checked alongside the asset, rather than after a subsidy figure has been estimated.

Prepare for the state process

Establish the land and tenure, location, crop or commodity, proposed area or capacity, technical specification and financing. Bring the project cost broken into its major components, along with quotations and existing-facility details where relevant. The state's current application instructions should determine the required sequence of approval, expenditure and verification.

For an existing project, preserve the application, sanction, approved specification, expenditure, payment and inspection records. The claim should demonstrate the approved activity and eligible costs, rather than only the total amount spent.

NHM and NHB are separate routes

The MIDH framework assigns specified activities and scales to NHM or NHB. Before choosing either, verify the latest component and capacity boundaries, including subsequent amendments. Do not add their assistance together for the same asset without examining the actual convergence and non-duplication rules.

Read the [MIDH Operational Guidelines 2025](#) and the separate [NHB project-assistance explanation](#). A current Haryana application also needs the operative state instructions and availability for the selected component.

Discuss the next step

For help assessing the project and preparing the applicable subsidy work, see [Subsidy & Incentive Advisory](#).
