

Haryana Renewable Energy Support: Choosing the Applicable Scheme

DRAFT FOR REVIEW | SCHEME | D052

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

A Haryana industrial renewable-energy project can raise two different subsidy questions: support for adopting renewable technology within a unit, or incentives for a qualifying energy-generation project. The equipment, scale and policy version determine which question applies.

The older directory name “Renewable Energy Scheme” does not identify one universal benefit. Two official notifications illustrate why the distinction matters.

Renewable technology in an industrial unit

The Revised State Renewable Energy Scheme notified in July 2023 under the MSME Policy 2019 addresses specified renewable-energy technologies used in industry. Its examples include solar photovoltaic and thermal systems, biomass gasifiers, biogas and biomass boilers. The notified assistance is structured around eligible loan interest, with its own annual limit and support period.

A unit assessing this route needs the technology specifications, intended industrial use, term-loan details and evidence of interest paid. The equipment purchase value alone is not the assistance calculation.

A qualifying generation project

A separate May 2023 notification under HEEP 2020 addresses captive solar projects above the stated scale and specified agricultural-residue bioenergy projects. It describes industrial or thrust-sector treatment and particular support for eligible bioenergy projects.

A generation project needs an assessment of fuel or energy source, generation capacity, captive use, land, grid or other connection arrangements and the permissions relevant to the installation. These provisions should not be quoted as a general capital subsidy on every factory rooftop system.

What to establish for your investment

Prepare a single project note stating the proposed technology, rated capacity, energy use, feedstock where applicable, investment and financing. Identify whether the project is already installed, under a prior sanction or newly proposed. Those facts allow the relevant notification and period to be selected without mixing the two benefit structures.

Both underlying policy histories also need to be considered in light of Haryana’s July 2026 successor policy. Historic terms remain useful for reviewing earlier projects, but a new proposal needs the operative implementing and transition provisions before an amount is included in its financing plan.
