

Haryana Research and Development Centre Assistance

DRAFT FOR REVIEW | SCHEME | D053

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

Haryana's June 2021 Research and Development Centre Scheme supported qualifying facilities for developing or improving products, processes, technology, design and quality. The June 2021 notification permits an eligible centre to be standalone or situated within a new or existing enterprise.

The project must demonstrate research activity. Routine production equipment or a quality-control room does not become an eligible R&D centre merely by changing its name.

Policy period and present-day use

This explanation covers the notification issued under HEEP 2020. Haryana notified its Progressive MSME & Export Promotion Policy on 29 July 2026, expressly superseding HEEP 2020. An older claim and a new investment therefore need separate checks of the transition provisions, relevant dates and operative scheme instructions. The historic benefit below should not be entered as an assured receipt in a new project budget.

Recognition is a release condition

The notification makes recognition by the Department of Scientific and Industrial Research, or DSIR, a condition before assistance is released. The research programme, organisation and facility therefore need to be assessed against the recognition route as well as the state incentive.

The centre must also remain operational at disbursement and hold the applicable registrations and permissions. Buying equipment is one stage; establishing and operating the recognised centre is another.

What the historic assistance describes

The scheme provides 50% assistance towards eligible project cost, capped at ₹5 crore. Building cost is constrained to a maximum of 25% of project cost within the notified calculation. A detailed cost schedule should distinguish the research facility, machinery and equipment from unrelated manufacturing or office expenditure.

Prepare a description of the proposed research, the products or processes it addresses, the technical team and the role of each major asset. This helps connect the cost estimate to the centre's actual purpose.

Documents and submission

The application file should contain the enterprise and centre particulars, operation date, DSIR recognition evidence, site permissions, asset invoices and payments, and the prescribed cost certification. Keep the research activity record and funding schedule consistent with the project submitted.

The original notification sets a three-month claim period linked to the start of operation or notification, whichever is later. Historic claims need a date assessment, including any applicable delay-condonation or transition provision, rather than an assumption that they remain fileable indefinitely.

Read the [R&D Centre Scheme](#) and [2026 successor policy](#). A university collaboration with a defined research project may require a different scheme assessment from establishing an in-house centre.

Discuss the next step

For help assessing the project and preparing the applicable subsidy work, see [Subsidy & Incentive Advisory](#).
