

Haryana Mini Cluster Development Scheme

DRAFT FOR REVIEW | SCHEME | D056

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

A mini cluster allows a group of micro and small enterprises to create a common facility that addresses a shared production or service constraint. Haryana's October 2021 notification supports this collective investment through a member-led special purpose vehicle, or SPV.

The scheme is useful where the members can show a practical need for shared equipment and enough demand to operate it. The starting point is the common problem, such as a missing processing capability, rather than the maximum grant available.

A functioning group owns the project

The notification requires functional micro and small enterprises in the relevant cluster and a private limited company as the SPV. It sets different minimum member counts for the prescribed grant bands. Member contributions and responsibilities need to be supported by the company's records.

This structure differs from the Section 8 organisation specified by the [Textile Cluster Development Scheme](#). The legal form from one programme should not be carried into another application.

Project cost and member contribution

The notified model provides 90% state contribution and 10% SPV contribution for an eligible project costing up to ₹5 crore. Assistance is linked to the approved common facility and its conditions. The members still need to arrange their contribution and a viable operating model.

A diagnostic study should establish the cluster's present capability, demand for the proposed service and the capacity required. The project report should then connect the selected machinery, land arrangements, infrastructure and costs to that finding.

Implementation continues after sanction

The SPV must plan procurement, permissions, staffing, maintenance and user charges. The notification requires the facility to become functional within two years of final approval. A practical schedule should account for equipment delivery, installation, utilities and commissioning.

Maintain member resolutions, contribution payments, procurement records and progress reports. A shared facility needs clear access and charging arrangements so that its benefit reaches the intended members and its operating costs can be met.

The original scheme commences from 1 January 2021 and describes continuation until discontinuation by government. Haryana's [2026 successor MSME policy](#) makes the applicable transition and implementing instructions important for a present-day proposal. Read the [Mini Cluster notification](#) before selecting the application route. The central [MSE-CDP](#) is separately governed.

Discuss the next step

For help assessing the project and preparing the applicable subsidy work, see [Subsidy & Incentive Advisory](#).
