

Haryana Assistance for Electronic Waste Management

DRAFT FOR REVIEW | SCHEME | D058

Designated reviewer: Atul Goyal. Review pending. PDF prepared 15 September 2026 from the current repository manuscript. This drafting date is not a verified review, approval or source-verification date.

The Haryana notification titled Assistance for Waste Management has a specific financial-assistance scope: electronic-waste management and e-waste recovery projects for industries in the Electronics System Design and Manufacturing sector, or ESDM.

Its general environmental objective should not be read as a subsidy offer for every recycling, municipal-waste or biofuel project. The proposed input material, recovery process and applicant's sector must fit the operative provisions.

Policy period and present-day use

This explanation covers the notification issued under HEEP 2020. Haryana notified its Progressive MSME & Export Promotion Policy on 29 July 2026, expressly superseding HEEP 2020. An older claim and a new investment therefore need separate checks of the transition provisions, relevant dates and operative scheme instructions. The historic benefit below should not be entered as an assured receipt in a new project budget.

What the historic incentive provides

The October 2021 scheme describes assistance at 50% of eligible project cost, capped at ₹50 crore. Land and building together are subject to a maximum share of 25% of project cost in the calculation. It applies to eligible new ESDM enterprises under its conditions, including specified enterprise scales.

The grant is linked to expenditure and project progress. The notification sets staged releases against defined expenditure milestones. The total assistance should therefore not be modelled as cash available before the promoter begins implementation.

Define the recovery project precisely

Prepare the incoming e-waste categories, proposed processing steps, recoverable outputs, residual waste and the capacity of each major system. The machinery and infrastructure estimate should correspond to that process. A mixed-waste business needs a clear separation of the activities proposed for this particular incentive.

Land and building costs should be scheduled separately from machinery, equipment and other expenditure so that the notified limit can be applied. Keep invoices and payment records connected to the approved project components.

Permissions and an operating facility

The subsidy does not replace the permissions required to receive, store, process or dispose of the relevant material. The original notification requires applicable registrations and permissions and an operating unit at disbursement. Its statement about the industrial restrictive list does not remove environmental obligations.

For a historic claim, assemble the project dates, land possession, expenditure milestones, operation evidence and earlier approval correspondence. The 2026 policy transition must then be assessed against that history.

Read the [Assistance for Waste Management notification](#) and [2026 successor policy](#). For a different recycling or biofuel investment, begin with the project's actual process under [Subsidy & Incentive Advisory](#), rather than applying this e-waste rate to an unrelated activity.

Discuss the next step

For help assessing the project and preparing the applicable subsidy work, see [Subsidy & Incentive Advisory](#).
